

ATTACHMENT A

Abstract Of The Disclosure

The invention concerns a compound corresponding to general formula (1) wherein, in particular, R₂ represents a phenylmethyl or naphthylmethyl or cyclohexylmethyl radical, 2- and 3-pryidinylmethyl, substituted on the cycle in meta or para position by an acid group or an alkyl radical of the type (CH₂)_n (with n = 3 or 4) substituted in terminal position by an acid group; and R₃ represents a hydrogen group or a linear or branched C₁-C₄ alkyl or alkylcycloalkyl with a C₃-C₆ cycloalkyl. The invention also concerns the use of a compound of general formula (I) for preparing a pharmaceutical composition for treating diseases related to proliferative processes, cancers and/or metastases.
